

Shackleton's Experience

Shackleton's Experience uses a simulation to host a range of physical and mental challenges. Each scenario is designed to deeply engage your team's problem solving & communication skills, and reinforce the idea of one common goal for all.

The story goes... several months ago, your group abandoned its ship and watched with great disappointment as the wreckage and remaining supplies plunged to the icy depths. You have been struggling to survive and therefore must make the dangerous trek over the ice and open waterways to Paulet Island, where in a previous expedition he left behind some food and an emergency transmitter. This is essential to find a way for the entire crew to be rescued. Can your team work together and make it out alive?
